Letter of Recommendation

30 September 2026

To Whom It May Concern,

I am writing this letter to recommend Loh Jia Le John. During his time with our team, John consistently demonstrated a strong work ethic, technical adaptability, and a proactive approach to software development.

John contributed across multiple key development initiatives, working across back-end (Laravel, PHP) and front-end (Livewire, React Native) frameworks. His primary contributions include:

- **Process Automation & Back-End Development:** Contributed to our back-end capabilities by designing and implementing an automated data pipeline to streamline content uploads and support multi-document processing.
- **Rapid UI/UX Prototyping:** Supported our design team by turning Figma visual models into functional, interactive prototypes. He took the initiative to align cross-functional teams by establishing standardized component naming conventions and creating tracking systems in Notion.
- **Client-Side Engineering & Best Practices:** Built client-facing screens adhering to RESTful API standards. To improve codebase consistency, John authored reusable engineering documentation, including React Native component guidelines and implementation checklists for the team.
- **AI Tooling & Workflow Optimization:** Integrated modern developer tools—such as Claude Code, Codex, and Devin AI—into his daily workflow to support rapid prototyping, automate pull request reviews, and improve code efficiency and accuracy.

Throughout these projects, John showed meaningful growth, resilience, and maturity. He actively sought feedback, adopted structured Git workflows (branch management, draft PRs, and rebase conflict resolution), and continuously refined his development process.

John is a dedicated and thoughtful team member who brings a positive attitude to his work. He is a pleasure to work with, collaborates well with those around him, and has demonstrated himself to be a capable engineer and a dependable member of the team. I have appreciated having John work with us and am happy to recommend him for future opportunities.

Sincerely,

Daniel Tsou
Software Engineering Lead
